

History of smoking
and age 50 to 74

30-pack-year history of smoking
(one pack per day for 30 years,
two per day for 15 years, etc.)

Family history of lung
cancer and age 50 or older

Exposure to asbestos
and history of smoking

Of all these lung cancer risks, the worst is not getting screened.

Now, Floyd Memorial makes it possible for you to get the complete picture of your lung cancer risk with an affordable, safe CT lung cancer screening. Research shows that CT lung cancer screenings can reduce lung cancer mortality by 20 percent by detecting cancer at the earliest and most treatable stages, many times before symptoms are even present.

The cost is **ONLY \$89** with same day results and a consultation with a lung cancer patient navigator. A physician consultation will be scheduled for those with suspicious results.

Schedule your screening today. Call (812) 981-6208.
